Which is the Latest Update or Release?

Update 25.2 to Release 25, November 3, 2015.

Please Note: Update 25.2 is only for SaaS instances of 25Live.

Main 25Live Application

- **Email Event Details:** Improvements to emailing event details now allow you to include the event reference number in the subject line and the event details in the body of event emails generated in 25Live.
- **Login:** There is a new option to send all users to the login prompt, rather than loading the Viewer Seat for anonymous users.
- **Event Creation:** For single occurrence events, you can view and edit some location and resource details more easily. You can now see details such as resource quantities, assigning or unassigning locations, and adding setup instructions from the Event Wizard's right column.
- Various additional fixes and improvements.

Administration Utility

- Various fixes and improvements.

Configuration Utility

- **Login:** A new System Defaults configuration option is available to prevent guest browsing of 25Live. When the Sign In Required option is used, the login prompt will show immediately when any user accesses 25Live. If your institution is using Shibboleth for authentication, additional technical adjustments are required. Contact your Series25 Account Manager for assistance.
- **Event Creation:** Improved error handling when configuring Event Wizard's Event Create Options for dates.
- Various fixes and improvements.
